                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ó
                                                                                                                                                                                                    Included in the invention are polynucleotide sequences encoding the ART-I protein, and mutated ART-I proteins which when broken down intracellularly produce a tumour antigen peptide that can recognise HLA antigen and bound cytotoxic T cells. Antibodies which specifically recognise ART-I and its derivative peptides, are also included in the invention. ART-I exhibits cytostatic activity. The tumour antigen protein, tumour antigen peptide originating from it, their derivatives, and DNAs are applicable in vivo or in vitro as remedies, preventives and diagnostics for tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              capable of expressing the interferons and/or antigenic proteins (AP), antigenic peptides derived from the proteins or DNAs capable of expressing the antigenic proteins or peptides, in the manufacture of an agent for induction of antigen-specific T cells. The products of the invention have virucide and cytostatic activity and can be used for gene therapy or as inducers of antigen-specific T cells. The action of interferon-alpha (IRN-alpha) in a system for inducing specific cytotoxic T cell (CTL) by administering an antigenic peptide in an incomplete Freund's adjuvant (IRA) emulsion preparation form was evaluated. IRNS (or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       present sequence represents a fragment of the ART-1 protein, used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antigenic proteins, peptides, interferon or their encoding DNA, manufacture of an agent for the induction of antigen-specific T
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                       invention relates to a novel human tumour antigen protein, ART-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes the novel use of interferons (IFNs) or DNAs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tumor antigenic peptide; interferon; IFN; antigen-specific T cell;
virucide; cytostatic; gene therapy; IFN-alpha; cytotoxic T cell;
viral infectious disease; ART-1; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Included in the invention are polynucleotide sequences encoding the ART-1 protein, and mutated ART-1 proteins which when broken down intracellularly produce a tumour antigen peptide that can recognise HLA antigen and bound cyctotoxic T cells. Antibodies which specifically recognise ART-1 and its derivative peptides, are also included in the invention. ART-1 exhibits cytostatic activity. The tumour antigen protein, tumour antigen peptide originating from it, their derivatives, and DNAs are applicable in vivo or in vitro as remedies, preventives and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            present sequence represents a fragment of the ART-1 protein, used in
DNA encoding IFNS) are useful in the manufacture of a medicament for inducing antigen-specific T cells in an individual who has been administered with AP (or DNA encoding AP) or vice versa. The medicament is useful for the treatment or prophylaxis of a tumor or a viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel tumor antigen protein ART-1, tumor antigen peptide originating from it, their derivatives, and DNAs, applicable in vivo or in vitro as remedies, preventives and diagnostics for tumors

Novel protective sequence polynucleotides and polypeptides, used to identify modulators of their expression and activity, which are used in to treat central nervous system conditions, diseases and disorders -

Claim 1; Fig 6C; 325pp; English.

protect against cell death (i.e., apoptosis or necrosis). Sequences which protect against cell death (i.e., apoptosis or necrosis). Sequences AAH84132, AAH84132, AAH84126, AAH84256, AAH84265, AAH84281, AAH84132, AAH84132, AAH84132, AAH84132, AAH84132, AAH84135 and AAH84367 represent 10 full-length cDNA clones, while the remaining nucleic acid Sequences within the range given above represent the open reading frames (ORFS) of these CDNA clones. Sequences AAG98810-AAG98829 represent the polypeptides encoded by the cell death protective oRFs. The cell death protective cDNA clones are able to protective ORFs. The cell death protective cDNA clones are able to pathways when injected into a cell predisposed to or undergoing cell death. The cell death protective nucleic acids and polypeptides can be used in the diagnosis and treatment of disorders associated with cell death, and to screen for compounds which modulate their activity or a cell protective nucleic acids and polypeptides and antibody, a ribozyme, or an antisense molecule, can also be used to treat cell death-related diseases. Such diseases include those associated with the central nervous system including psychiatric or neurological disorders, especially ischemmia-related conditions such as strokes, and also includes neurodegenerative disorders such as Alzheimer's disease, Huntington's disease, The modulators may also be 

Vascular diseases such as ischemmic encephalopathy or cerebral infarction; eye conditions such as diabetic retinopathy or macular degeneration; eye conditions such as diabetic retinopathy or macular degeneration; hypertension; myocardal infarction; atherosclerosis; respiratory conditions such as sathma or chronic obstructive pulmonary disease; neoplastic conditions such as cancers or benign tumours; blood cell conditions such as anaemia; gastrointestinal conditions such as gastritis or ulcerative colitis; liver conditions such as biliary cirrhosis; kidney disorders such as glomerulonephritis; cystitis; endocrine disorders such as drawe's disease or Hashimoto's hyproiditis; skin conditions such as dermatitis or unticaria; or immune system disorders such as acquired immunodeficiency syndrome (AIDS). The nucleic acids may additionally be used to generate animal models of cell death-protective polypeptide. ö Gaps Gene 41 human secreted protein homologous amino acid sequence #157. ö Length 363; 100.0%; Score 37; DB 22; Length 3 100.0%; Pred. Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's and Parkinson's diseases and cancers -

Disclosure; Page 60-61; 440pp; English.

Polynucleotide sequences AAC80531-C80580 represent cDNA encoding human secreted proteins AAB45120-B45169. Sequences AAB45170-B45255 represent alternative polypeptides encoded by the genes, and amino acid sequences to which they are homologous. The genes and proteins have activities dependent on the tissues and cells in which they are expressed. Examples of their activities include immunosuppressive; antiarthritic;

```
cerebroprotective; nontropic; neuroprotective; antibacterial; virucide; and opthalmalogical. The secreted proteins, polynucleotides, antagonists and agonists may be useful in treating, preventing and/or antagonists and agonists may be useful in treating, preventing and/or diagnosing diseases and disorders such as autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral isohemia, anglogenesis, nervous system disorders e.g. Alzheiner's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin adjudent oclusions, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotraxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. AAC80822-C80530 and ABA4519 represent sequences used in the isolation and characterisation of the genes and proteins of
   antirheumatic; antiproliferative;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                the invention.

```
Included in the invention are polynucleotide sequences encoding the ART-1 protein, and mutated ART-1 proteins which when broken down intracellularly produce a tumour antigen peptide that can recognise HIA antigen and bound cyrotoxic T cells. Antibodies which specifically recognise ART-1 and its derivative peptides, are also included in the protein, tumour antigen peptide originating from it, their derivatives, and DNAs are applicable in vivo or in vitro as remedies, preventives and
                                                                                                                                                                                                                                                                                                                                           Novel tumor antigen protein ART-1, tumor antigen peptide originating from it, their derivatives, and DNAs, applicable in vivo or in vitro as remedies, preventives and diagnostics for tumors \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel human tumour antigen protein, ART-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents the human ART-1 protein sequence.

```
Streptococcus/GBS (Streptococcus/GBS) to a properties or group A streptococcus/GBS (Streptococcus/GBS (Streptococcus/GBS) comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antihilammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used to recombosition. The disease caused by Streptococcus that is prevented or treated may be maningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                               New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cenarchaeum symbiosum open reading frame protein sequence SEQ ID NO:56.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a protein (ABP25413-ABP30895) from group B

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAM25963. The proteins can have activities based on the tissues and cells they are expressed in, such as: antiinflammatory; antirheumatic; antiarthruttis they are expressed in, such as: antiinflammatory; antirheumatic; cells they are expressive; antibacterial; endocrine; cardiant; cardiancesive; antibacterial; endocrine; cardiant; cardiancesive; antiagregant; hemeostatic; unloreray; antiparkinsonia; and immunostimulant. The proteins and polynucleotides antiparkinsonian; and immunostimulant. The proteins and polynucleotides antiparkinsonian; and immunostimulant. The proteins and polynucleotides concoding them can be used in gene therapy, antisense therapy and vaccine production, The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation; heumatold arthritis, septic shock, pancteatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, hemmatopoictic disorders, anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, chinitis, asthma, disease, thrombocytopaenia, wounds, burns, ulcers, chinitis, asthma, disease, parkinson's disease, neurodegenerative and chinitis, and disorders.

AAY45390 to AAY48214 represent specifically claimed immunogenic peptides having a human major histocompatibility complex (MHC) Class I (also known as human leukocyte antigen (HLA) binding motif. The immunogenic peptides can bind to a specific HLA) binding motif. The immunogenic peptides can bind to a specific HLA-B or C) and induce a cytotoxic T cell response against the antigen from which the peptide is derived. Cytotoxic T lymphocytes (CTLS) which destroy antigen-bearing cells are normally induced by an antigen in the form of a peptide fragment bound to a HLA molecule, rather than the intact foreign antigen itself, and are perticularly important in tumnour rejection and in fighting viral infections. The peptides are therefore useful therapeutically to treat or prevent viral infections and cancers in mammals (especially humans) e.g. prostate cancer, hepatitis B and C, ALDS, and renal carcinoma. They can be administered as vaccines to elicit an immune response in individuals susceptible or otherwise at risk of viral infection or cancer, or used to treat chronic or acute conditions. They are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Immunogenic peptide having a human leukocyte antigen binding motif #2505
and proteins isolated from the non-thermophilic crenarchaeote Cenarchaeum symbiosum. The nucleic acids and proteins identified in the present invention are useful in characterising the physiology of these archae and can be used in therapeutic, industrial or laboratory techniques. AAA5527 to AAA55260 represent promoter sequences from Cenarchaeum symbiosum. AAA55261 to AAA55269 represent PCR primers and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human leukocyte antigen; binding; immunogenic; glycoprotein; MHC; HLA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               immune response; T cell activation; major histocompatibility complex; cytotoxic T lymphocyte; CTL; tumour rejection; viral infection; cancer prostate cancer; hepatitis B; hepatitis C; AIDS; renal carcinoma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         motif, useful in treatment

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to identification of cytotoxic T cell lymphocyte (CTL) epitopes (AAM22116-AAM23484) that generate anti-HIV activity. CTL are a major protective mechanism against viral diseases. Antibodies may neutralise extracellular human immunodeficiency virus (HIV) and limit or prevent infection of cells in the host, but CTL will limit viral production by killing the cell. The CTL epitopes are useful in medicine, in the manufacture of vaccines or diagnostic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Hansen J;
                                                                                                                                                                           Gaps
useful diagnostically, and can be used to induce a cytotoxic T cell response, by contacting a cytotoxic T cell with the peptide e.g. to produce CTLs ex vivo for infusion back into a patient. The polynuclectides encoding the immunogenic peptides are also useful therapeutically and for immunisation as above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The generation of cytotoxic T cell lymphocytes epitopes for use anti-HIV vaccines -

The present invention relates to human immunodeficiency virus (HIV) and in particular to a human leukocyte antigen (HLA)-based HIV vaccine. The vaccine comparises a mixture or linear array of peptides, or its variants, where the peptides contain immunodominant T-helper (Th) epitopes and major histocompatibility complex (MHC) cytotoxic T-lymphocyte (CTL) epitopes and the linear array of peptides are preferably expressed in modified Vaccinia ankara. The vaccine is useful for immunising a patient against HIV and focuses immune response on many dominant and subdominant CTL epitopes of HIV. DNA or live vectors with
                                                                                                                                                                                                                                                                                                                          linear arrays of CTL epitopes can be used as either primes or boosts of peptides or of each other to optimally give CTL anti-HIV responses. The vaccine induces salutary anti-HIV immune responses. AAU12447-AAU12558 represent the amino acid sequences of the Th-CTL epitopes and HIV immunogenic peptides used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

source anonymous pool of 6 male brains, age range 23-27; male lung, age 27; and 1 male testis, age 69. Library is oligo-dr primed and directionally cloned (Ecork site is destroyed upon cloning). Average insert size 1.8 kb, insert size range 1-3 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 021. Note: this is a NIH, MGC Library.
                                                                                                                                                                                                                                                                                                                                                                                                                         128
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     188

of three ovaries, from females ranging in age from 38 to 49 yo. Library is oligo-dr primed and directionally cloned (ECORV site 1s destroyed upon cloning). Average insert size 2.1 kb, insert size range 1-3.5 kb. Library is normalized and enriched for full-length clones and was constructed by C. gruber (Invitrogen). Research Genetics tracking code 036.
1214 bp mRNA linear EST 20-FEB-2002

WCI_CGAP_Ch2 is a normalized cDNA library containing the
following tissue(s): Chondrosarcoma Grade II The library
was constructed according to Bonaldo, Lennon and Soares,
Genome Research, 6:791-806, 1996. First strand cDNA
synthesis was primed with an oilygo-dr primer containing a
Not I site. Double stranded cDNA was ligated to an EcoR I
adaptor, digested with Not I, and cloned directionally
into pT773-Pac vector: The oligonucleotide used to prime
the synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
